### DETAILED ACTION

1. In view of the arguments filed on 1/20/05, prosecution is reopened. New grounds of rejections are presented in this Office Action.

#### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 4-6, 8, 9, and 11-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Hayashi et al., hereinafter Hayashi (US Patent 5,365,078), newly cited.

Regarding claims 1, 4-6, 8, and 11-13, Hayashi discloses in figure 2, a field effect transistor (FET) device comprising an upper surface of the channel region 12, which is corrugated (the channel region directly contacts layer 13 which is corrugated, hence the channel region is corrugated); and a pair of source/drain regions. Note that the gate electrode 16 is corrugated, also.

Regarding claims 2 and 9, the (FET) device is selected from the group consisting of metal oxide semiconductor field effect transistor (MOSFET) devices and metal semiconductor field effect transistor (MESFET) devices.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3, 7, 10, and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hayashi.

Hayashi substantially discloses the claimed invention, as discussed above, except for the longitude peak and the depth of the curved channel region. However, it would have been obvious to one of ordinary skill in the art at the time of the invention to adjust the height of the bumps on the gate electrode to make the transistor with suitable sizes for various applications. See *In re Woodruff*, 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990) for the proposition that that when the specification contains no disclosure of either the critical nature of the claimed dimensions of any unexpected results arising therefrom, the Applicant must show that the chosen dimensions are critical.
